8 Tips to Protect Your Identity

Identity theft continues to be one of the fastest growing crimes in the United States. In 2015, there were 13.1 million victims of identity fraud in the U.S., according to Javelin Strategy and Research. Bank of Blue Valley recommends following these tips to keep your information – and your money- safe.

Don't share your secrets.

Don't provide your Social Security number or account information to anyone who contacts you online or over the phone. Protect your PINs and passwords and do not share them with anyone. Use a combination of letters and numbers for your passwords and change them, periodically. Do not reveal sensitive or personal information on social networking sites.

Shred sensitive papers.

Shred receipts, bank statements, and unused credit card offers before throwing them away.

Keep an eye out for missing mail.

Fraudsters look for monthly bank or credit card statements or other mail containing your financial information. Consider enrolling in eStatements through BlueWave, Online Banking, to reduce the likelihood of paper statements being stolen. Also, do not mail bills from your own mailbox with the flag up. Sign up for BlueWave Bill Payer for a convenient and secure way to pay your bills.

Use online banking to protect yourself.

Monitor your financial accounts regularly for fraudulent transactions and sign up, through the BlueWave, to receive account and/or transaction based Alerts. To receive text or email alerts for certain types of transactions, such as online purchases or transactions of more than \$500, performed on your BBV debit card, download the CardValet® app and register your card.

Monitor your credit report.*

Order a free copy of your credit report every four months from one of the three credit reporting agencies at annualcreditreport.com.

Protect your computer.

Make sure the virus protection software on your computer is active and up-to-date. When conducting business online, make sure your browser's padlock or key icon is active. Also, look for an "s" after the "http" to be sure the website is secure.

Protect your mobile device.

Use the passcode lock on your smartphone and other devices. This will make it more difficult for thieves to access your information, if your device is lost or stolen. Before you donate, sell, or trade your mobile device, be sure to wipe it using specialized software or using the manufacturer's recommended technique. Some software allows you to wipe your device remotely if it is lost or stolen. Use caution when downloading apps, as they may contain malware and avoid opening links and attachments – especially for senders you don't know.

Report any suspected fraud to your bank immediately.
